

CLASSIFICATION

Course ID : PP1012_ Classificaton_v1.0

Lesson Objectives

- Objectives -On successful completion of this training module, you should have:
 - Understood the basics of Classification
 - Purpose , use and challenge of Classification
 - Important steps and Example for Classification

Training Agenda

- Purpose And Use Of Classification
- Terminology
- Objective Type And Class Type
- Classes, Class Status And Class Hierarchy
- Characteristics

Training Agenda

- Values
- Configuration
- Master Data
- Assignments Of Objects
- Examples
- Classification in Purchase Order Release Procedure
- Transport Classes And Characteristics.

Purpose

Classification is the process of assigning objects to classes and using the characteristics of the class to assign values to these objects. Classification helps in maintaining values to different characteristics under one class

Example:

A Lancer Car has different Colors, Power, Capacity, Height.
Here Car forms the Class and the Colors, Power, Capacity, Height forms its Characteristics.

Purpose

Use

Challenges

- Classification System should be simple and at the same time cover all applicable Master Data and Documents.

Different dimensional systems (metric MKS vs. English FPS) used across the world. This has a major impact on material classification based on characteristics which are measured in different dimensional systems (such as centimeters instead of inches) across the organization. This would effect material searches and would lead to having more than one material number for the same component.

Important Steps

Example

Class: **CAR**

Terminology

Object type	The object type is inferred from a classifiable table.
Object	An object is a classifiable unit.
Class type	A class type is a top-level unit of control for classes.
Class	A class groups similar objects together.
Characteristic	A characteristic describes properties of an object.
Value	A value is a specific option for a characteristic.

Object Type

A Object Type is created with a SAP Table which also known as Object Table.
All the Class Type are created under a Object Type

Object Type Controls:

- Screen in Classes (Trans Code: CL20N)
- Sub screens that needs to be embed in the central assignment screens of the Classification
- Screen Sequence for Class maintenance

Class Type

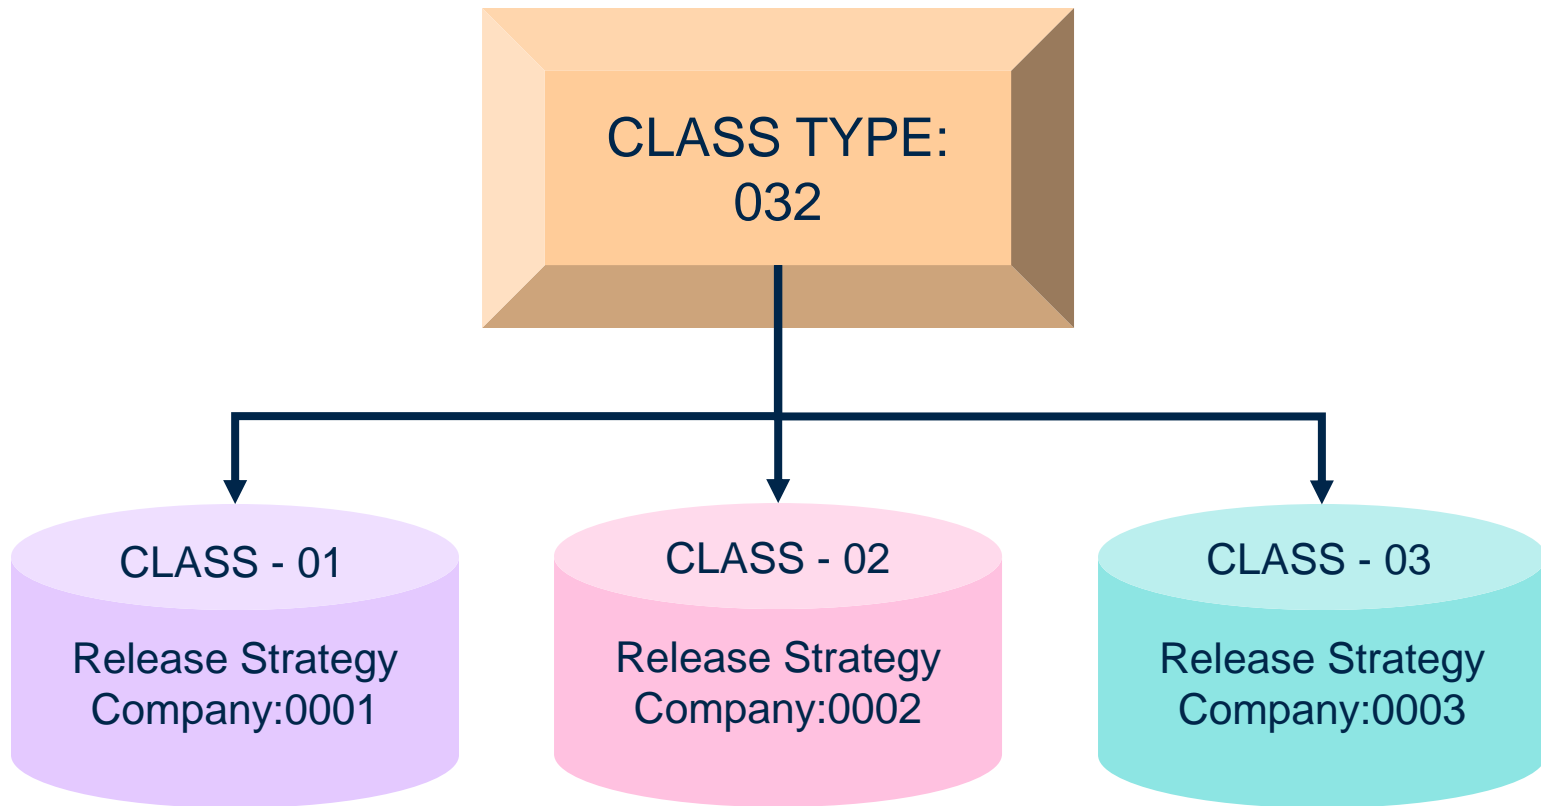

- Class Type is a Central component in the Classification System
- Class Type determines how the Classes are processed and how objects can be classified in these classes
- Each Class Type are assigned to an Object Type. The Classes created with these Class Type can be used to classify the objects of this Object type

Example of Object Type: Material, Release Strategy

- Examples of Class Type are:
 - 001: Class Type for Material
 - 300: Class Type for Variant Configuration
 - 200: Class Type for Bill of Material

Classes

Class Status

Class Status determines

- Whether a Class can be maintained
- Whether objects can be allocated to a Class
- Whether the Class can be used for selecting objects

Characteristics

Characteristics '**COLOR**'

Characteristics '**WEIGHT**'

- The values maintained in a Characteristics specifies the properties of an Object

Example: Characteristics 'COLOR' has the value Red, Blue...

- Characteristics are created centrally and are assigned to the Classes

Values

- List of allowed Values can be maintained for a Characteristics, from which any one can be selected while classifying the Object
- A Value in a Characteristics can also be made default
- Intervals can be maintained for Values. Example: Gross Price between 10 USD to 1000 USD
- Table can also be used to check the Allowed Values maintained in the Characteristics

Class Hierarchy

- Several Class can be assigned to one main Class and thereby help for faster search of Objects
- Class Hierarchy can also be in graphical form
- Class Hierarchy can be:
 - Class Hierarchy without Inherited Characteristics
 - Class Hierarchy with Inherited Characteristics

Characteristic

Characteristics

- Characteristics are always created with a Class Type
- The various Data Type allowed are
 - Character Format – Alpha numeric characters allowed
 - Currency Format
 - Date Format – Periods of time or concrete points in time
 - Numeric Format – Only Numbers allowed
 - Time Format – Periods of time or concrete points in time

Characteristics

SAP Menu → Cross Application Component → Classification System → Master Data → Characteristics. Transaction: CT04

The screenshot shows the 'Change Characteristic' (CT04) transaction in SAP. The 'Basic data' tab is active, displaying fields for Characteristic (ZPOVALUE_GBP), Change Number, Valid From (17.08.2007), and a 'Validity' button. Below this, the 'Basic data' section includes Description (Total net order value), Chars Group, Status (1 Released), and Auth. Group. The 'Format' section includes Data Type (CURR Currency Forma), Number of Chars (15), Decimal Places (2), Currency (GBP), and Template. A 'Value assignment' section is highlighted with a blue box, showing radio buttons for 'Single-value' and 'Multiple Values' (selected), and checkboxes for 'Interval vals allowed', 'Negative Vals Allowed', 'Restrictable', and 'Entry Required'.

Value Assignment

Status

The screenshot shows the 'Change Characteristic' (CT04) transaction in SAP, with the 'Descriptions' tab active. It displays the same header information as the previous screen. Below the tabs, the 'Descriptions and headings' section contains a table with two columns: 'Language' and 'Description'. The table has one row with 'EN' in the Language column and 'Total net order value' in the Description column.

Language	Description
EN	Total net order value

Classification in Purchase Order Release Procedure:

XYZ Corporation manufactures Monitors and Computer accessories. It has 10 Purchasing Groups (P01 – P10). The PO Release Strategy was partially configured before the Consultant was replaced. Release Group RG (containing codes AM – Assistant Manager and MG – Manager, SM – Sr. Manager and VP – Vice President). You are the new Consultant in charge of taking the process forward and the you have the following as the first task.

- Create a Release Class (of Type 032) and assign to Release Group RG.
- Create Release Characteristics PO_PURGRP representing the Purchasing groups and assign values based on the existing Purchasing groups and PO_VAL representing the total net order value of the PO.
- Define Release Indicators (B-Blocked, R-Released)
- Define a Release Strategy RG-S1 (Release Codes AM and MG and prerequisites being in that order and under classification assign values P01 and 0-5000 \$)
- Create a Purchase Order and test the Release Strategy

Transport Classes and Characteristics

The values you assigned to characteristics in Development client cannot Be transported. They are stored in characteristic value tables that must be moved through your SAP environments via the ALE (Application Link Enabling) function.

It is therefore important to remember to request ALE with your transport. Following figure is a sample spreadsheet of transaction codes, which you can provide to your Basis team

Tips

Transport Classes and Characteristics (Inputs for ALE)

Object	Transaction	Message Type
Characteristics: Purchasing_Group PR_Value	BD91	CHRMAS
Class: PR_Release Class Type: 032	BD92	CLSMAS
Class: PR_Release Class Type: 032	BD93	CLFMAS
